

SUNY KOREA SOLAR TEAM

Sponsorship Packet

About Us

The Team

The SUNY Korea Solar Team is a student-led multidisciplinary engineering organization whose main objective is to; develop, build, and race solar powered vehicles in international races such as the Bridgestone World Solar Challenge, and American Solar Challenge, while creating a hands on environment where students can get the opportunity to apply their theoretical knowledge in solving practical engineering challenges, develop technical skills, and grow through a collaborative project based learning.

The Race

The SUNY Korea Solar Team's primary competitive goal is to race in the Bridgestone World Solar Challenge (BWSC), hosted in Australia. Widely regarded as the world's premier solar car competition, the BWSC brings together university teams from across the globe to design, build and race solar powered vehicles over a distance of approximately 3,000kilometers from darwin to adelaide. The event is internationally recognized not only for its scale, but also for the level of engineering excellence, efficiency, and endurance it demands of teams.

The BWSC serves as a global platform for innovation in sustainable mobility, Teams must develop lightweight, reliable , aerodynamically efficient, and fast cars that can perform in the challenging conditions of the Australian outback for days on end. For the SUNY Korea Solar Team, the BWSC represents a major technical challenge and long term education goal, offering students the opportunity to apply their knowledge in real multidisciplinary projects while working towards one of the most respected competitions in student engineering.

Partnership

The SUNY Korea Solar Team is always looking to expand our network of partners and supporters as we look to continue to develop our competitive solar racing program. As a student-led engineering program, we depend on strong collaboration with organizations that believe in innovation, education and the future of sustainable mobility.

What we're asking for

As the SUNY Korea Solar Team works toward building a competitive solar racing program, we are constantly seeking opportunities to expand our skills, strengthen our resources, and access the tools and technologies needed to grow. Without the dedication of sponsors and partners, it would be difficult for the team to continue development at the level required for international competition.

While there are many ways to support our cause, financial support is our greatest need as it allows us to use resources more flexibly and effectively for vehicle development, materials, software, testing, logistics, and overall team operations.

Other ways of supporting our team as a partner include:

- Fabrication of solar car components
- Donation of raw materials, parts, equipment, software
- Discounts on parts, materials, equipment, or software
- Technical support during vehicle development and operation

Why partner with us

Partnering with the SUNY Korea Solar Team is an opportunity to support a student-led engineering initiative centered on innovation, hands-on learning, and long-term technical development. Through the challenge of designing and building a solar racing vehicle, our team gives students practical experience in engineering design, manufacturing, testing, systems, integration, and project management while working toward internationally recognized competition goals.

By supporting our team, partners contribute to not only the development of a competitive solar racing program, but also the growth of future engineers and problem solvers. The project reflects a strong intersection of education, technology, and sustainable mobility, while we offer partners visibility through team materials, digital platforms, outreach activities, and branding on the vehicle itself.

Sponsorship Opportunities

We welcome support in several forms depending on the partner's strengths, interests, and level of involvement. Because building a competitive solar racing program requires resources across many areas, contributions of different types can each have a meaningful impact on the team's growth and progress.

Areas of Support

- Financial support
- Technical partnership
- Manufacturing & material support
- Software & technological support
- Parts & equipment support
- Logistics support

Where Support Makes an Impact

- Vehicle development
- Manufacturing & testing
- Software & simulation
- Logistics & operations
- Student training & team growth

Partner Recognition

(Recognition and partnership benefits may vary depending on the nature and level of support provided)

- Website & social media acknowledgment
- Inclusion in team materials
- Opportunities for collaborative events or sponsor-featured content
- Logo placement on the vehicle
- Recognition in outreach and presentations
- Recognition on team apparel and promotional items

Looking Ahead

Our Vision

The SUNY Korea Solar Team is looking to build more than a competition vehicle. Our goal is to establish a lasting student-led engineering program that gives students meaningful hands-on experience while advancing innovation in sustainable mobility. Through long-term development, technical growth, and strong industry collaboration, we aim to create a team capable of representing SUNY Korea and our partners in major international solar racing competitions.

Our Roadmap

2026: Foundation Building

- Formalize the team's structure, recruitment, and internal training systems
- Begin early sponsor outreach and build the team's organizational and technical foundation

2027: Design & Technical Development

- Begin design of major vehicle systems across mechanical, electrical, and aerodynamic areas
- Expand technical capabilities through research prototyping, and subsystem development

2028: Vehicle Build & Testing

- Manufacture, assemble, and integrate solar racing vehicle and major subsystems
- Conduct testing, refinement, and validation of vehicle performance, reliability, and safety

2029: World Solar Challenge Debut

- Complete final preparations of vehicle and team for international competition
- Participate in Bridgestone World Solar Challenge as team's first major race

Closing

We believe this project represents a valuable intersection between engineering education, innovation, and sustainable mobility. With the support of committed partners, the SUNY Korea Solar Team hopes to continue developing into a competitive and meaningful student engineering initiative with long term impact.

Contact

If you are interested in supporting the SUNY Korea Solar Team or learning more about our project we would be glad to connect.
